

Kogan Creek Power Station

The Kogan Creek Power Station is a 750 megawatt coal fired power station owned by CS Energy on the Darling Downs in Queensland.

BMD Constructions recently completed the construction of a new ash disposal dam to replace the existing dam. Shurjoint XH-1000 extra heavy rigid couplings were chosen by the contractor for the two ash slurry and high pressure water pipelines (150NB, Sch. 80 seamless pipe).

Shurjoint XH-1000 is designed for high pressure services up to 1000 psi (70 bar) and to join cut groove pipes, allowing easy & quick removal and cleaning in most areas, makes it environmental friendly when compared with other pipe-joining methods such as welding, soldering or brazing.
