

Casa Bandeirista

The biggest commercial building in the new Sao Paulo financial district has a differential. It was built over a city historical house property with over 150 years old and could not be touched or destroyed during the construction. The house is being

refurbished now and will be a museum.

The building has 19 floors up and 6 garaging parking levels down.

The first level down had to start with 18 meters below the ground level. They could not have any conflict with the house structure.

Alvenius and Shurjoint were chosen into this fire protection piping installation because of their solid partnership with the Brazilian most important fire protection installer Temon. Only the biggest grooved inventory of Latin America provided by Alvenius together with the reliability, quality, and fast installation of Shurjoint Piping Products were capable of providing products for this immense building in a short period.
