

Tokyo Sky Tree Mall

Tokyo Sky Tree is a broadcasting, restaurant and observation tower under construction in Tokyo, Japan. It has been the tallest artificial structure in Japan. The tower reached its full height of 634.0 meters (2,080 ft) in March 2011.

Shurjoint Model 7705 flexible couplings were used for the fire protection System. The engineers are satisfied with the products as installation process is relatively simple and requires only a spanner or wrench at a job site which increased the installation and elimination of the flame precautions or risks over traditional methods.
