

Incheon International Airport

Incheon International Airport is the largest airport in South Korea, and one of the largest and busiest in Asia. The airport opened for business in early 2001, replacing the older Gimpo International Airport. The airport serves as a hub for international civilian air transportation and cargo traffic in East Asia.

Many Shurjoint #K-9 couplings and #7721 Mechanical Tees were used in the parking lot and other areas for the fire protection system. The grooved system's unique ability to accommodate seismic movement made it the natural choice for this challenging project.
