

Nangang Tri-Railway Station

New Nangang station is a modern tri-railway station for TRA, HSR, and MRT systems. Nangang Project is an extremely difficult as the above systems will be co-constructed on the original site of old station and Nangang station and having been performed next to TRA's current existing tracks, Shurjoint Ductile Iron & Stainless Steel couplings & Fittings were specified by the designer as grooved system is an ideal pipe joining method for its ability to accommodate for seismic activity and allowing the installation can be made in highly restricted locations.
