

Regional Justice Center – Boiler Replacement

The heating & cooling system of Regional Justice Center (18 story facility) were required to be repaired. The system requires constant maintenance and repair because of poor water quality resulting from an inadequate chemical treatment program. The mechanical contractor contacted Rain for Rent to engineer a filtration capable of removing suspended solids from the heating and cooling system prior to implementation of a new chemical program.

Shurjoint products were used throughout the entire application by Rain for Rent and they are extremely happy with Shurjoint qualified products and customer service there in Las Vegas.
