

# Ouray Water Treatment Plant

Shurjoint Model R-88 Ring-Joint couplings were chosen by the fabricator to replace ANSI Class 150 flanges. 48" flanges are twice the weight of R-88 couplings, and require 44 bolts and nuts to assemble and torque, compared to 16 with this size of coupling.

R-88s provide angular movement for settling or pipe-misalignment. They assemble perpendicular to the piping and provide a restrained joint. Construction and MRO is easier with R-88s couplings and the 48" finished joint is less than eight inches in length, saving room for other important equipment in the design.

## location

Utah, USA

## year

2007

## application

Water Treatment

## productline

VSH Shurjoint
